Oh SNAP!

How to disable the Windows 10 SNAP feature

A Learn in 30 presentation
For PATACS + OPCUG November 21, 2020
By John Krout

What is SNAP?
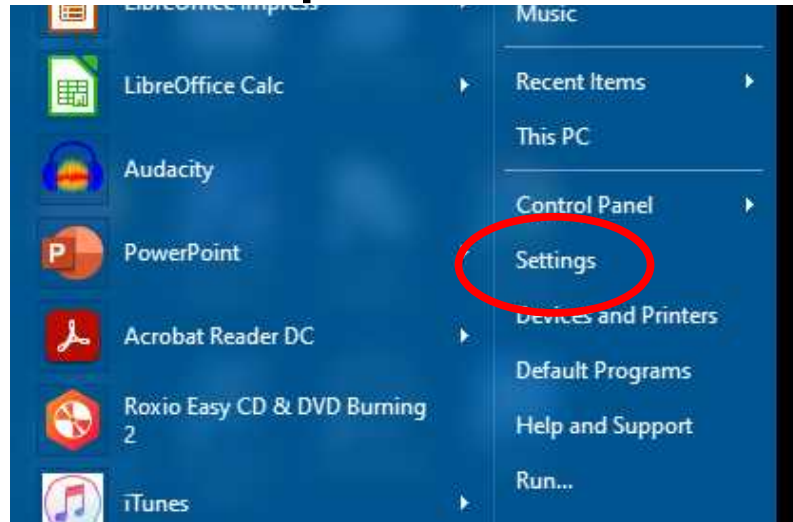

Not snapping fingers   Not snapping photos

- By default, Windows 10 **auto resizes a window to full screen** if you drag the top edge of the window above the top of the screen or drag the window to a corner of the screen.

 This SNAP behavior can be very inconvenient. Sometimes it can happen accidentally.

How to Disable SNAP

1. Open the Windows menu by tapping the key or clicking the screen button

2. In the menu, open the **Settings** application

How to Disable SNAP

## 3. In the Settings application, select **System**

How to Disable SNAP

4. In the System screen, select **Multitasking** in the left column

How to Disable SNAP

5. In the Multitasking screen, turn off the SNAP WINDOWS switch.

The Windows main menu

- The Windows 10 menu appears when you tap the ▦ key or click the ▦ button in the lower left corner of your screen

- The default Windows 10 menu combines many of the features I did not like, in the Metro style of Windows 8

A streamlined menu for Windows 10

- I use a freeware application called **OpenShell** to streamline the menu to the classic style of Windows 7

Download OpenShell

- There are many download sites for OpenShell

- One site:

  https://www.techspot.com/downloads/7103-open-shell.html
