

# HOW TO CUSTOMIZE YOUR SMART PHONE VOICEMAIL GREETING

Add the familiar SIT tones to convince robocallers  
not to call you again

Presented by John Krout  
For PATACS/OPCUG  
July 18, 2020

# Agenda

- Voicemail greeting options
- Voicemail greeting storage
- What are SIT tones
- Why robocaller systems pay attention to SIT tones
- How to obtain the SIT tones
- An example of a customized voicemail greeting including SIT tones
- How to transfer a customized greeting from a computer onto a smart phone
- The process for recording a greeting on Verizon Wireless / Android 10
- How to play back a customized greeting on your computer and record it on your smart phone

# Voicemail greeting options

There are three general options you can use for Verizon Wireless voicemail greetings:

- Automatically state your phone number
- Play your recording of your name
- Play a custom recording, containing whatever you want to say

# Voicemail greeting storage

- Whatever you choose, the audio is stored on phone company computers.
- There is a reason: the computers can provide your voicemail greeting to any caller when your phone is, for instance, turned off, out of range of a cell tower, or in airplane mode.

*Note: audio embedded in next slide*

# Special Information Tones (SIT)

- These are the famous 3 tones that preface almost all automated phone company Intercept messages, such as the Number Not In Service message.

# Why robocaller systems pay attention to SIT tones

- Robocaller systems are expensive to obtain and operate
- Robocaller systems want to dial only phone number known to be in service
- Dialing numbers known to be Not in Service is a waste of robocaller system time

# Why robocallers pay attention to SIT tones

- When robocaller systems hear the SIT tones, the systems mark the phone number as Not In Service so the systems do not call it again
- *You can take advantage of that behavior*

# How to obtain SIT tones

- Various web sites offer free downloads of Intercept messages, for instance:

<https://beatriceco.com/bti/porticus/bell/recordedannouncements.html>

- OR, call a number known to be Not In Service, and record the call using a call recording app such as **Cube ACR** for Android.
- Use an audio editor, such as **Audacity**, on your computer to remove the announcement words, so you can use the SIT tones in your voicemail greeting.

# An example of a voicemail greeting including SIT tones

- Created using Audacity to record voice through a microphone, and then combining the SIT tones plus that voice recording

*Note: audio embedded in next slide*

# An example of a voicemail greeting including SIT tones

- Transcript:

Hi, this is John. No, my number is not disconnected. Those tones were just meant to convince robocallers not to call me again. You can leave a message after the beep. Thanks.

# How to transfer a custom voicemail greeting onto your smart phone

TWO METHODS for transferring analog audio from your computer to your phone

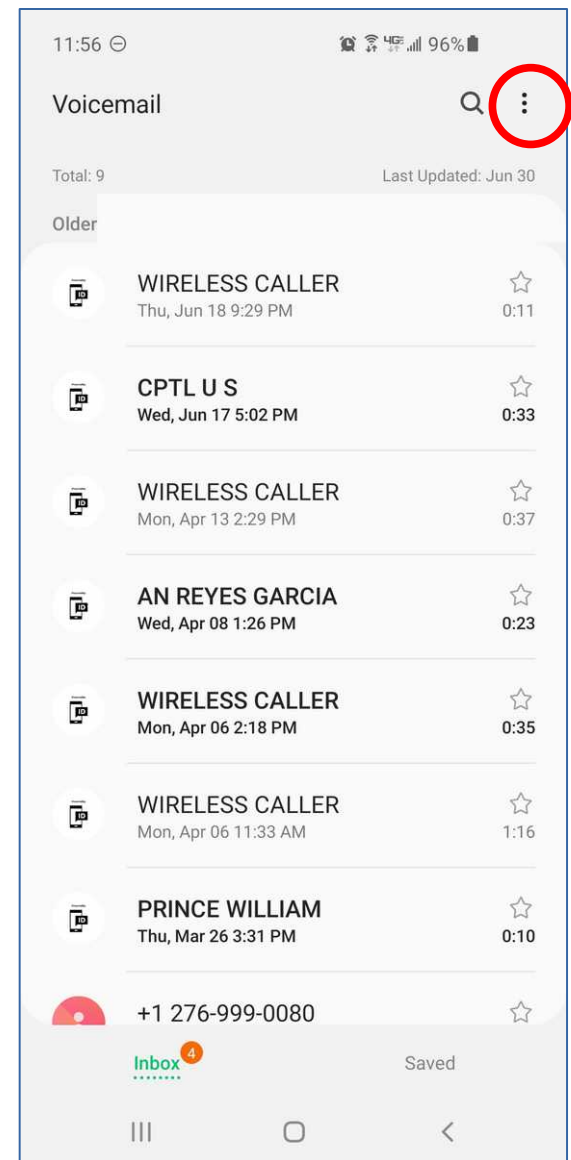

1. **The Free Method:** low quality; or
2. **The Cable Method:** costs about \$39 for audio cables. Much better audio quality. Much easier to start and stop recording on your smart phone. *May require a mixer.*

# How to transfer a custom voicemail greeting onto your smart phone

- Both methods require that you know how to record a voicemail greeting using your smart phone.
- The recording process varies depending on your smart phone carrier company (Verizon Wireless, T-Mobile, et cetera) and your phone OS (Android or IOS)

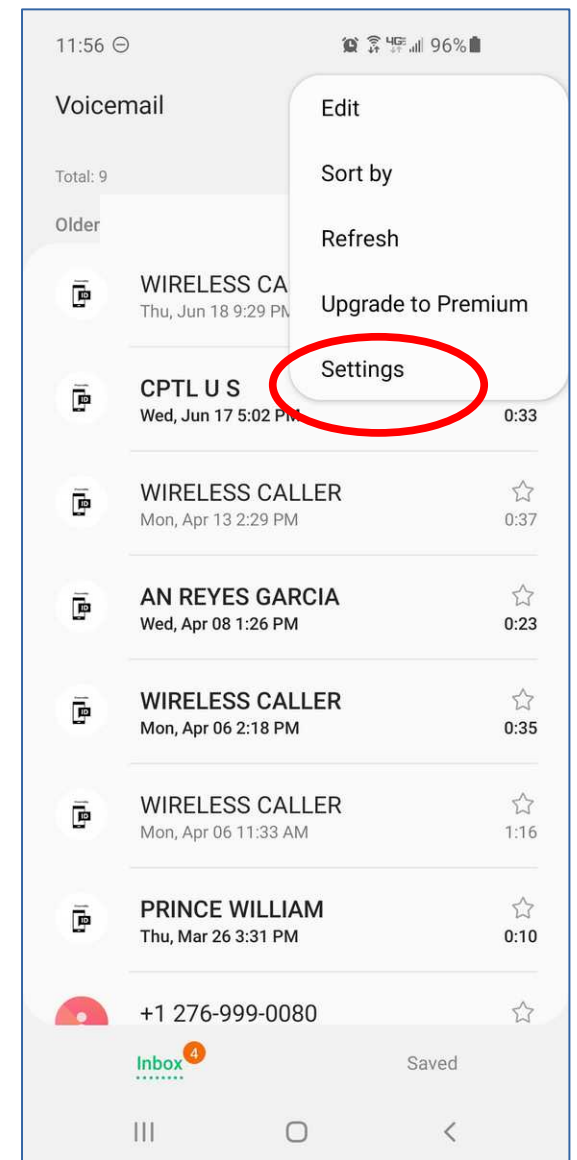

# Verizon Wireless / Android 10 greeting recording process

- Open the Voicemail app. As of June 2020, it looks like this.
- Tap the three dots in the upper right corner

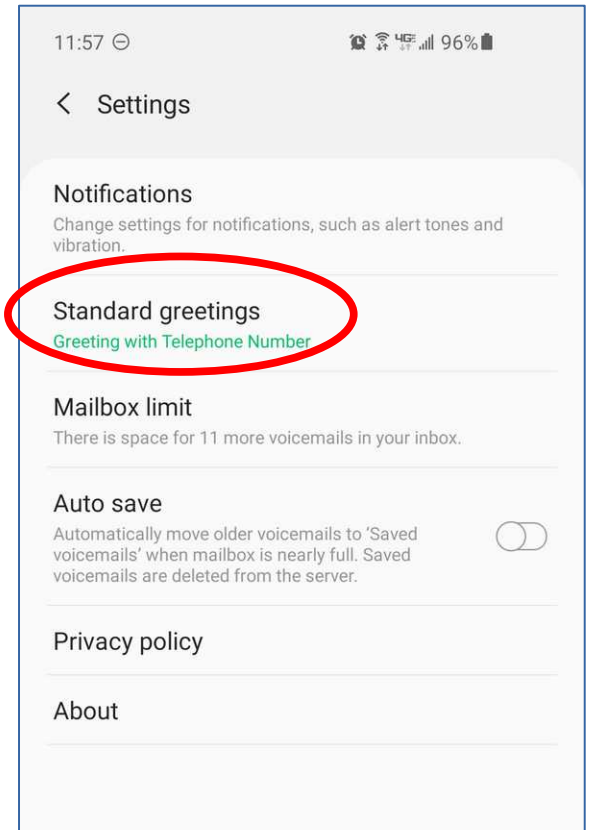

# Verizon Wireless / Android 10 greeting recording process

A menu appears. In the menu, select **Settings**.

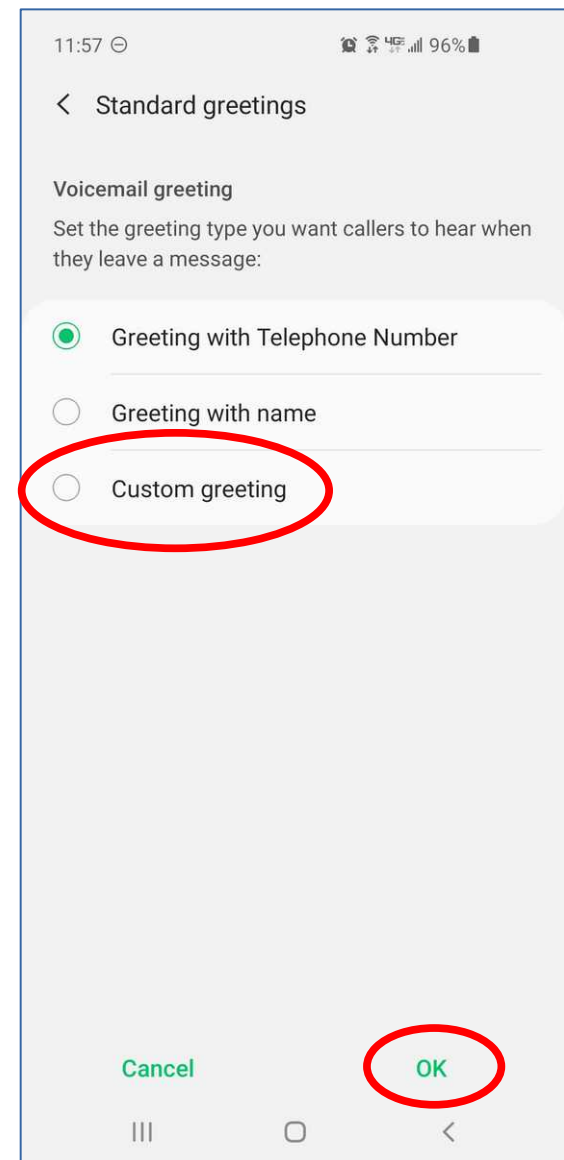

# Verizon Wireless / Android 10 greeting recording process

- The Settings screen appears.
- In that screen, tap **Standard greetings**

# Verizon Wireless / Android 10 greeting recording process

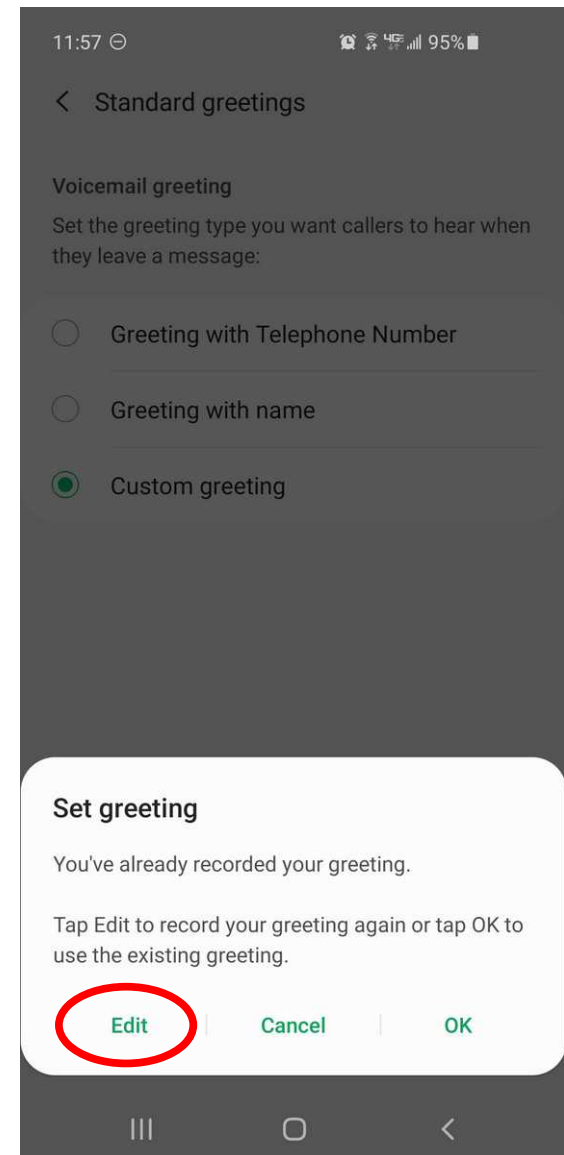

- The Standard Greetings screen appears.
- It includes three options
- Tap **Custom greeting**.
- Tap the OK button.

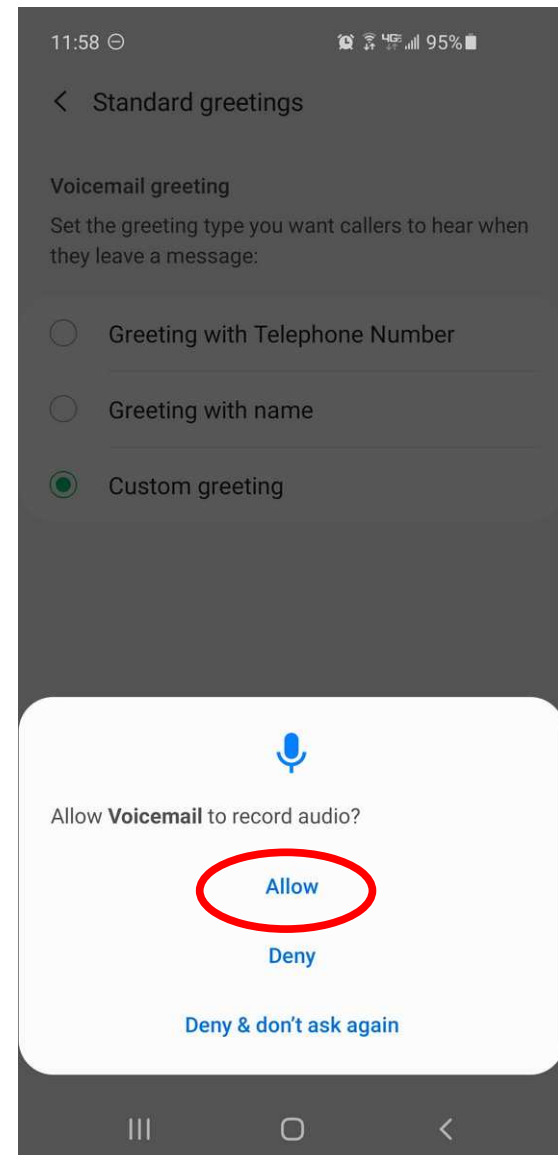

# Verizon Wireless / Android 10 greeting recording process

- If you previously recorded a custom greeting, then a Set Greeting popup appears.
- Tap **Edit** to record a new custom greeting.

# Verizon Wireless / Android 10 greeting recording process

- If you have not previously used Voicemail to record a custom greeting, then the Permission Request popup appears.
- Tap **Allow** to record a new custom greeting.

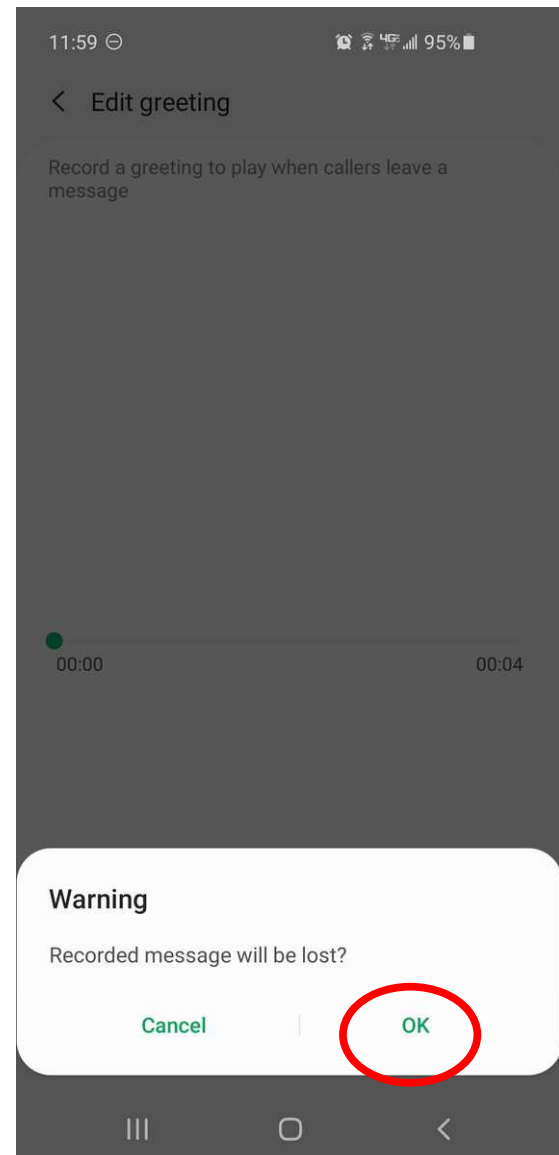

# Verizon Wireless / Android 10 greeting recording process

- The Edit greeting screen appears. It includes recording controls.
- Tap the **big red button** to begin recording.

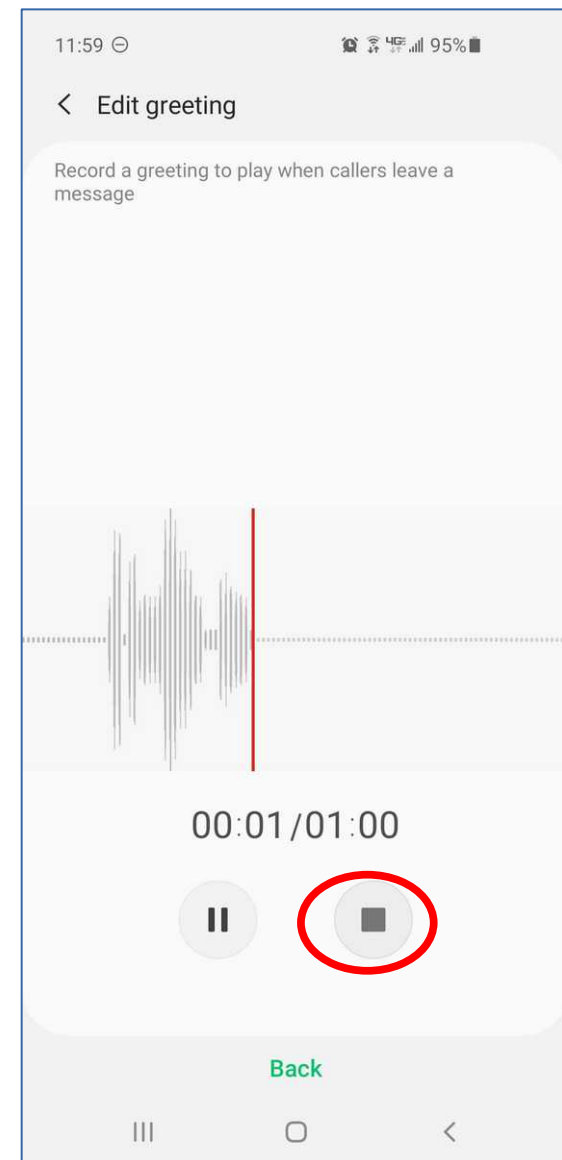

# Verizon Wireless / Android 10 greeting recording process

- If you previously recorded a custom greeting, then a Warning popup appears.
- Tap **OK** to record a new custom greeting.

# Verizon Wireless / Android 10 greeting recording process

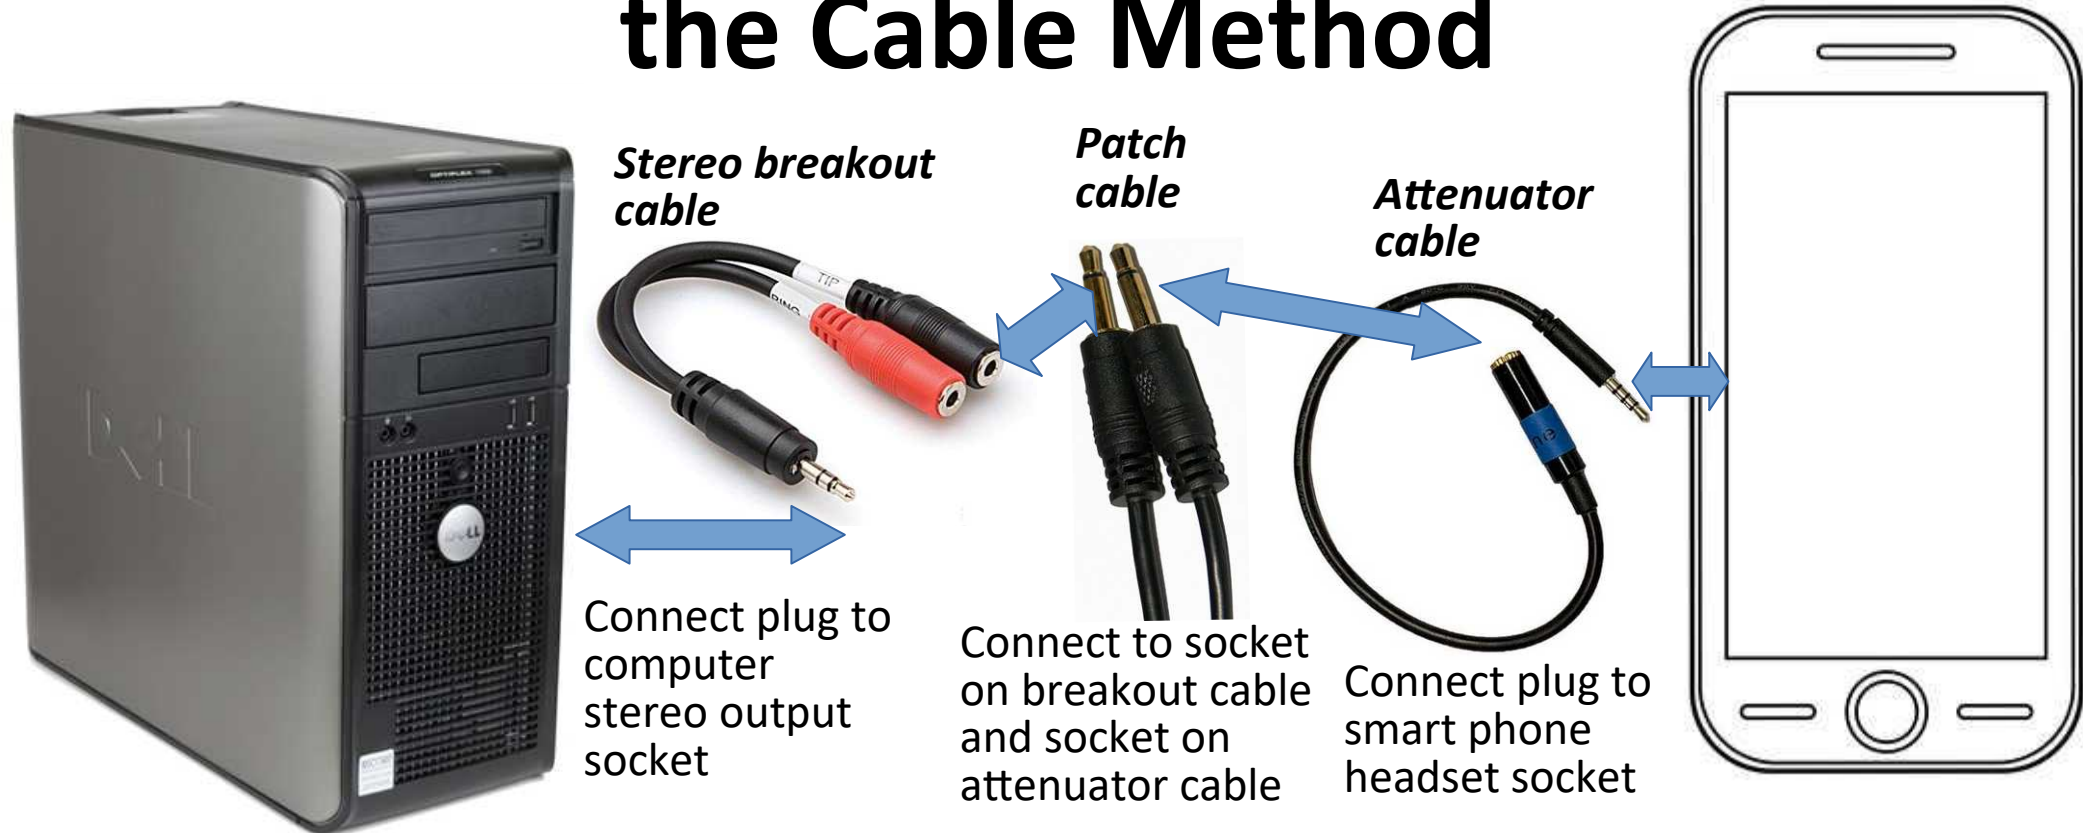

- While you are recording, you will see an oscilloscope-like graph of your audio.
- Tap the square Stop button when you are finished.

# Transferring computer audio playback to the smart phone: **the Free Method**

- On your computer, load your custom greeting audio file into an audio playback application.
- Hold your smart phone ***close to a computer speaker.***
- After you start recording on your smart phone, start playback on your computer.

# Transferring computer audio playback to the smart phone: the Cable Method

# Cable details as of June 2020

- **Stereo breakout:** Hosa YMM-261 3.5 mm TRS to Dual 3.5 mm TSF Stereo Breakout Cable, \$5.99 on Amazon
- **Patch cable:** Bargain Cable 3.5mm Mono Male to Male Cable 10 ft Gold Plated, \$6.88 on Amazon
- **Attenuator cable:** HeadsetBuddy Line-Level Audio Adapter with Built in Attenuation for iPhone, Smartphones, Soundboards and Mixers, \$26.25 on Amazon

# Test before recording the greeting

Make sure your cables work and ***your computer audio output level is appropriate.***

**iPhone:** record using the Apple Voice Memos app

**Android:** record using for instance the free Sony Audio Recorder app

# Advantages of the Cable method

- Place smart phone close to computer keyboard, making it easier to begin phone recording, start computer playback of custom greeting audio, and stop phone recording
- Eliminates phone microphone pickup of ambient noises (computer, airco, pets, doors et cetera)

# Test AFTER your voicemail greeting is recorded on Verizon Wireless

- Dial \*86 and tap the Dial button
- Enter your password and tap #
- Tap 4, 3, 1, 3
- The server plays your customized greeting
- Tap #

# Post recording test review

- If your customized greeting has a problem, then you can record it again!
  - Distorted, or
  - Not recorded in full, or
  - The volume is too low

# Transferring computer audio playback to the smart phone: the Mixer Method

*Stereo cable*

Connect plug to computer stereo output socket, mixer line input sockets

*Mixer*

Connect line output (one channel) to socket on attenuator cable

*Attenuator cable*

Connect plug to smart phone headset socket
